Sleepless Nights---Days and Days of Awful Agony.

Then: Instant Relief---No Amputation

The Skin Refreshed At Once---The Itch Gone. Gradually
Eruption Disappears---The Skin made Clean, Pure and Healthy.

with Wounds that Discharge or do not Heal!

They may be swollen or surrounded with inflammation, which when pressed with the fingers leaves its impression. If so there is a poison under the skin, which if not extracted will cause the sore to grow larger and larger and soon result in death. Perhaps your knees or ankles are swollen, the joints being ulcerated, while the skin is more or less discolored at the affected parts. Do not let this continue, or you may be deprived of your power to walk. Some may have told you that your case is hopeless, or that amputation was necessary.

Drefs' Family Ointment, used in connection with Drefs' Pills, will cure such wounds and sores, when everything else has failed.

Quick results will always follow the use of these two remedies. The Pills drive the poison from the system, while the Ointment heals the wounds. Both remedies will be sent to any part of the U. S. or Canada on receipt of 40 cents for the Ointment and 65 cents for the Pills.

Get Ready, for the Itch or the Amputation

The skin is the largest organ of the body and is the first line of defense against the elements. It is the skin that keeps the body cool and moist, and it is the skin that protects the internal organs from the outside world. When the skin is healthy, it is a barrier against infection and disease. But when the skin is itchy, it is a sign of trouble. Itch is a common skin condition that can be caused by a variety of factors, including allergies, dry skin, and certain medications. Itch can be very uncomfortable and can interfere with daily life. In severe cases, it can lead to skin damage and even amputation. But there is a way to get instant relief from itch without the need for amputation. The skin can be rescued and made healthy again, and the itch can be gone. This is the promise of the treatment described in this advertisement.

The treatment described in this advertisement is a natural, non-surgical method for relieving itch. It is based on the principle of skin regeneration. The skin is treated with a special preparation that stimulates the production of new skin cells. This process is called epidermal regeneration. As the new skin cells are produced, the old, itchy skin is replaced by healthy, new skin. The result is a skin that is clean, pure, and healthy. The itch is gone, and the skin is restored to its natural state. This treatment is safe, effective, and can be used on all types of skin. It is a true miracle of modern medicine.
